USAGES SPÉCIFIQUES			
P	Pâtisseries		
Q	QCEEP		
R	Régulation et contrôle auto.		Noté 22
S	Exclus		
AMENDMENT NUMERO			

1. The first step in the process of identifying a problem is to determine whether a problem exists. This is done by comparing the current situation with the desired situation. If there is a difference, a problem exists. The next step is to define the problem. This involves identifying the specific aspects of the problem that need to be addressed. Once the problem is defined, the next step is to identify the causes of the problem. This is done by analyzing the situation and identifying the factors that are contributing to the problem. Once the causes are identified, the next step is to develop a plan to address the problem. This involves identifying the actions that need to be taken to resolve the problem. Finally, the plan is implemented and the results are monitored to ensure that the problem is resolved.
